

ABSTRACT

The present invention is related to a mobile device controlling method for changing a setting of a mobile device capable of mounting a SIM card and an IC card for settlement. According to the present invention, a step (ST1) receiving and confirming an application for a setting change of the mobile device, an e-mail address specifying step (ST4) specifying an e-mail address of the mobile device, and an e-mail creating step (ST5) creating a setting change e-mail are conducted. Then, the setting change e-mail created in the e-mail creating step is sent to the e-mail address specified in said e-mail address specifying step.
